

Instructions for using the Panther when wireless is not working

On the Desktop of the Panther double click the Follett Remote icon –

Click Function – select Library if doing Library Manager jobs; such as inventory, circulation or making a book list. For now select Inventory – scan a couple of books – connect the Panther to the computer that has Microsoft ActiveSync loaded. The ActiveSync box should say connected and synchronized – now click on Explore in this same box – Mobile Device window should open up – click on IPSM folder – disconnect the Panther cable – close Follett Remote on the Panther(**this is a very important step**)-reconnect the Panther to the computer – open the Follett Remote folder – you will see a notepad check the date by clicking on it – if it is the correct date drag and drop this to your desktop or copy and paste it there (you may choose to use another location but make sure you remember where you have placed it). Disconnect the Panther from the computer. In Destiny go to inventory click on browse, just as you did when using the Dolphin, find your notepad you just moved – double click it so that it is showing in the line and click on upload. This part of the process is the same as using the Dolphin.

If you need help please call or email me.
